Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

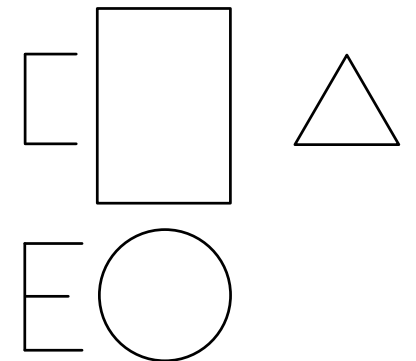

Instructions:

Draw, to scale 1:1, the following:

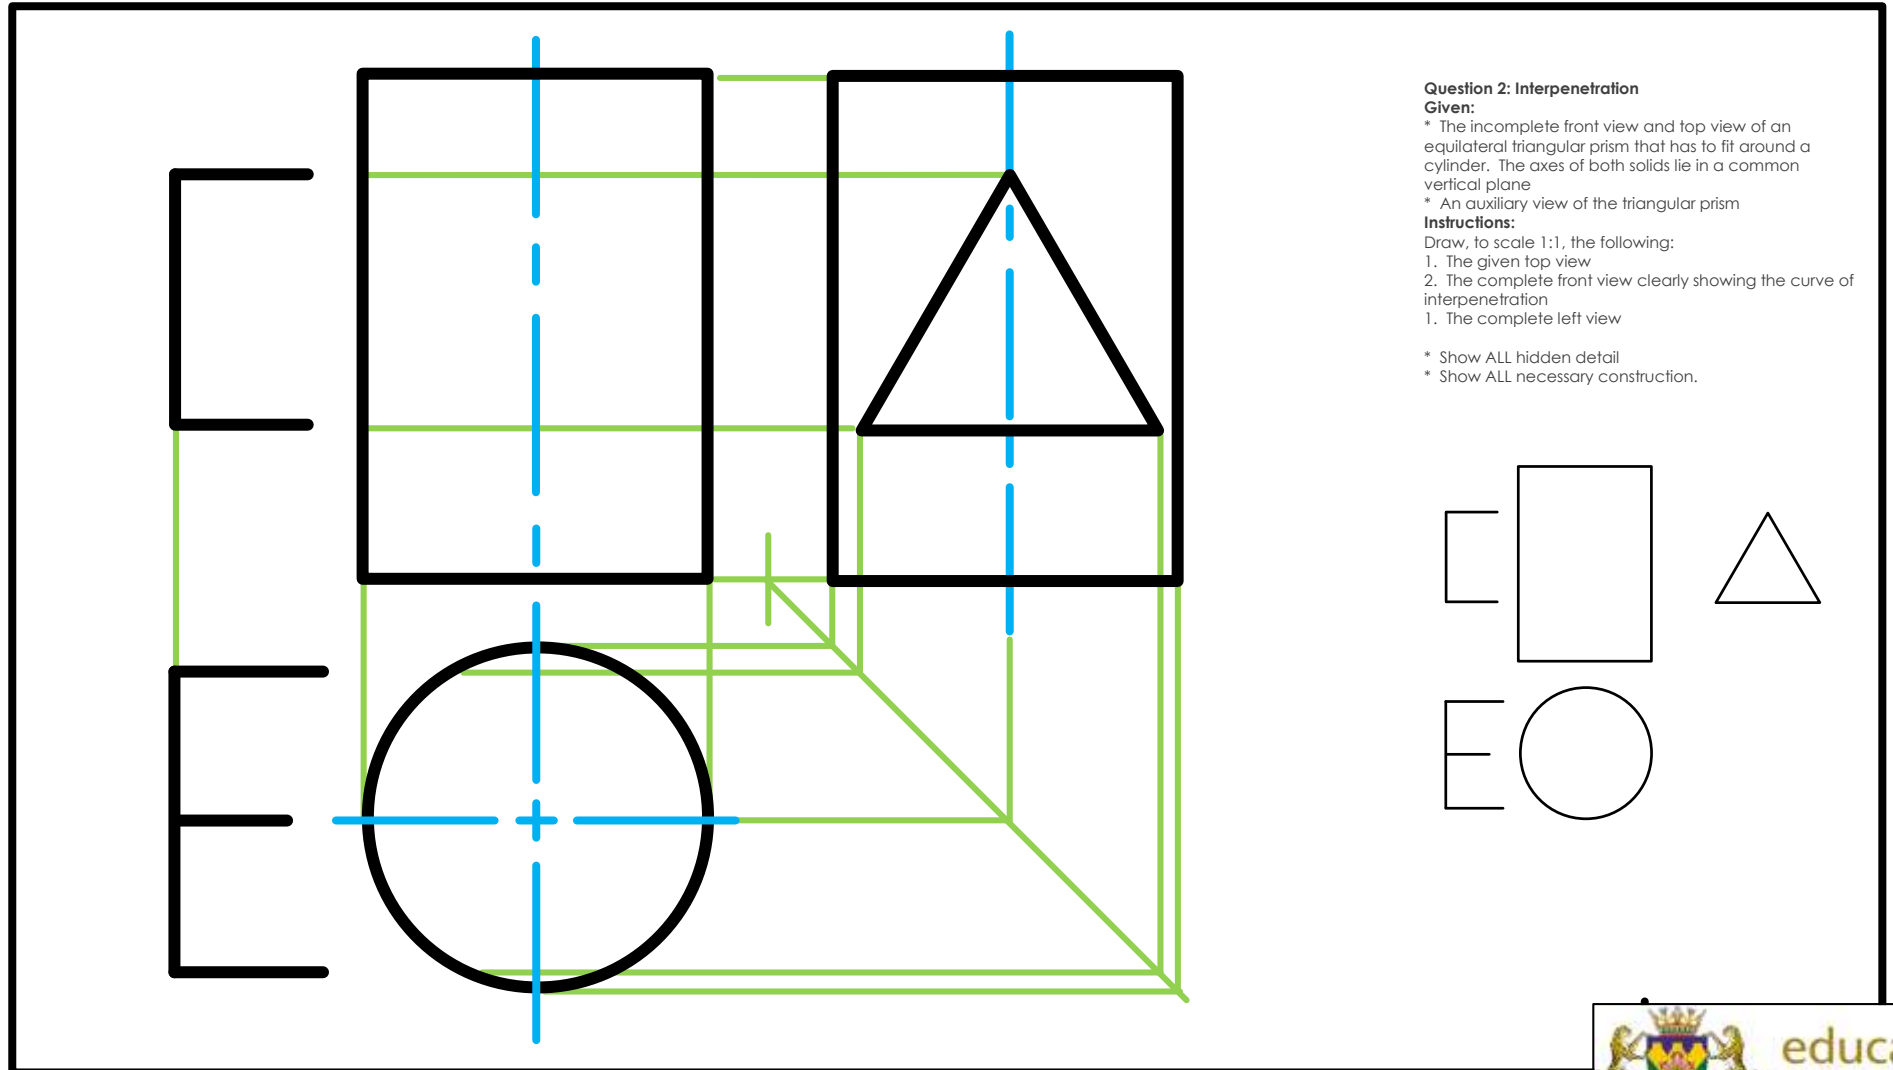

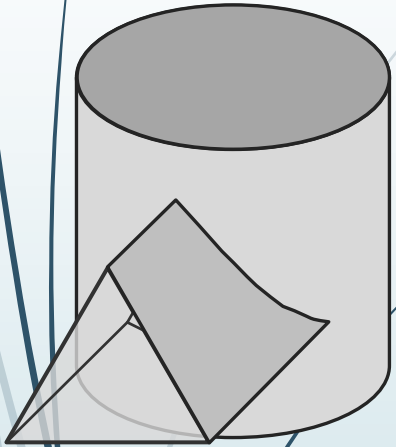

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

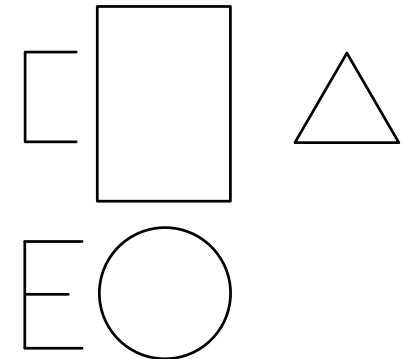

Instructions:

Draw, to scale 1:1, the following:

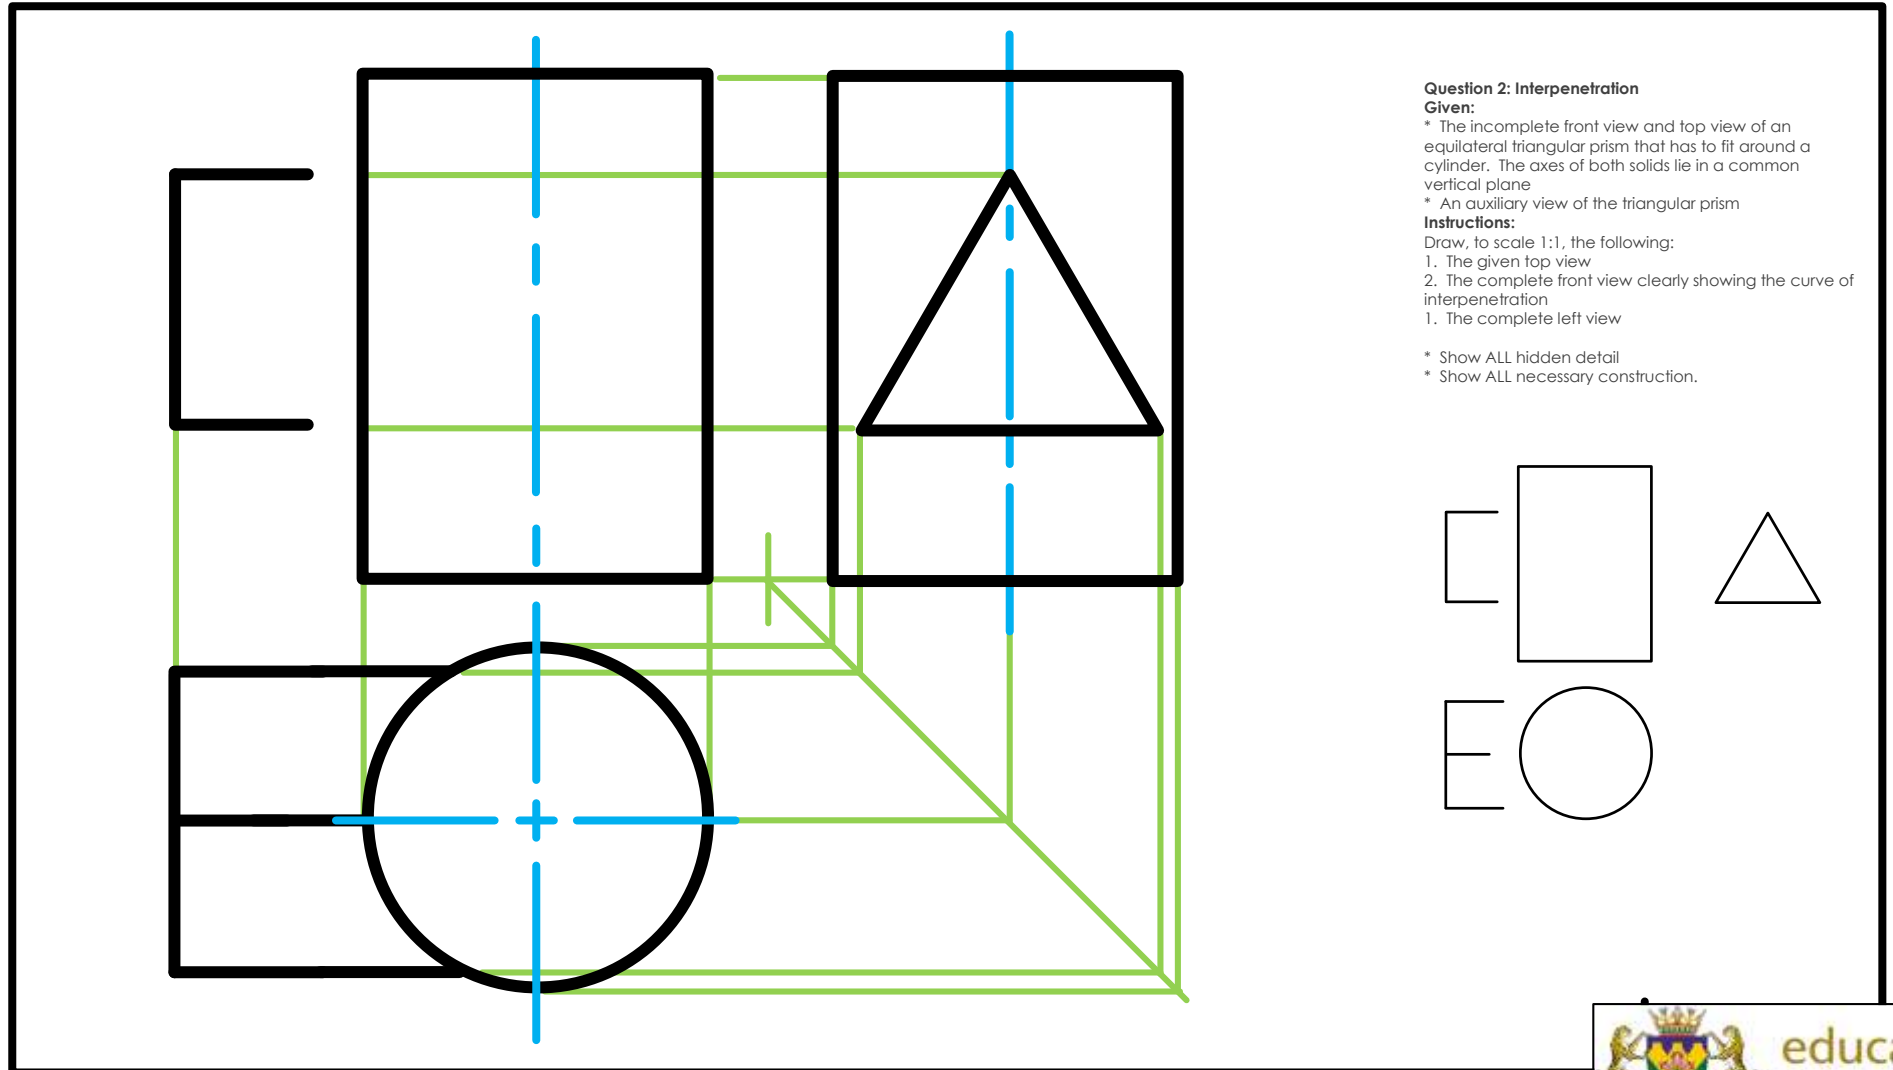

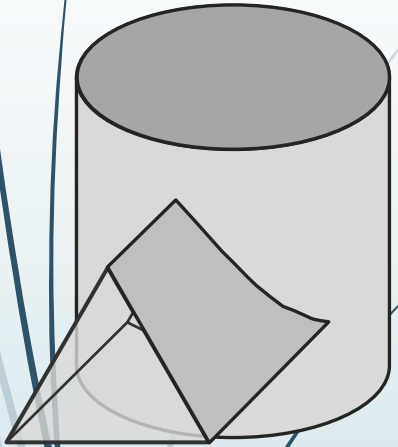

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

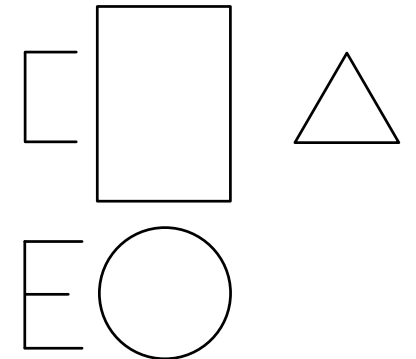

Instructions:

Draw, to scale 1:1, the following:

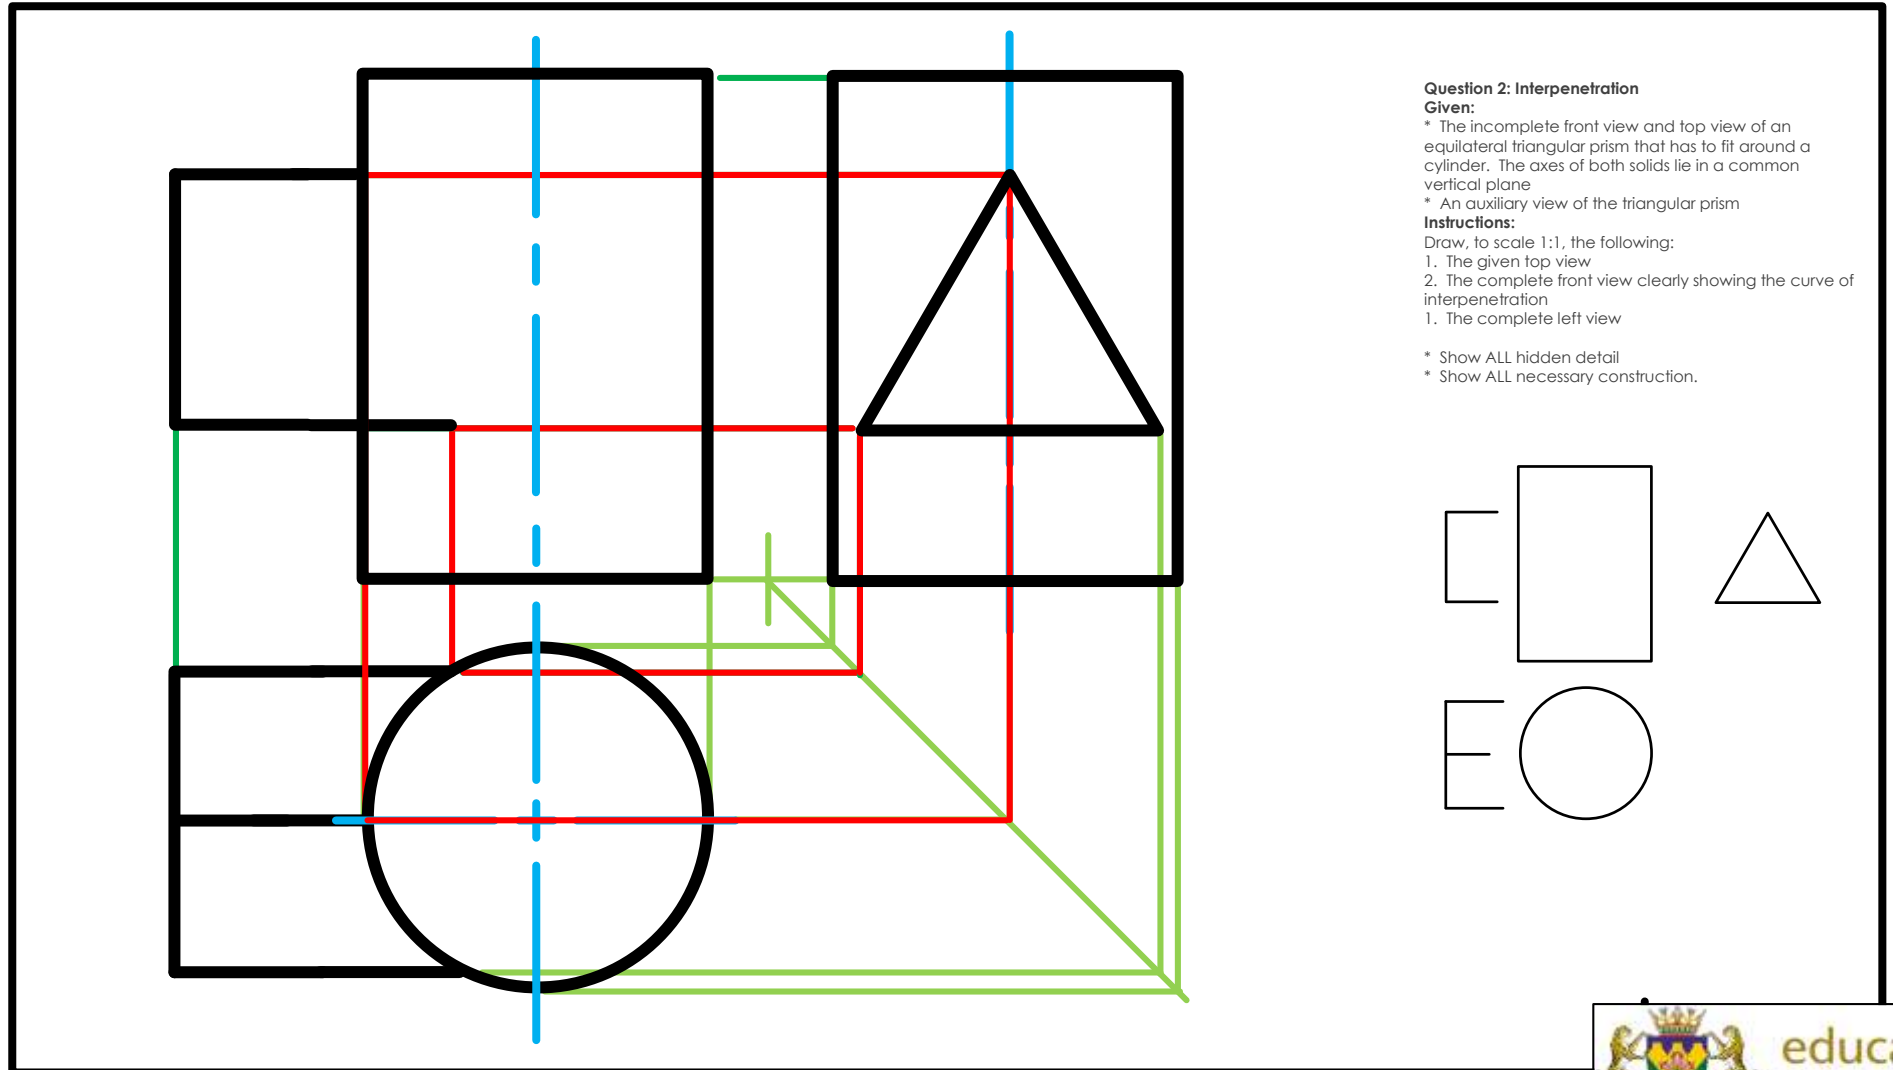

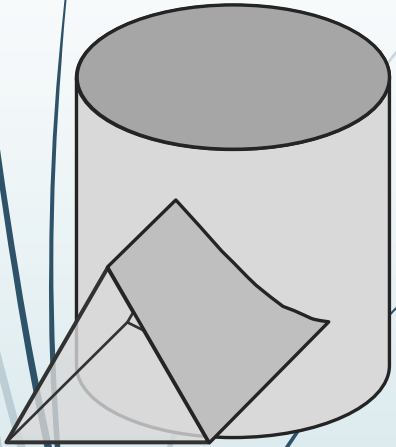

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

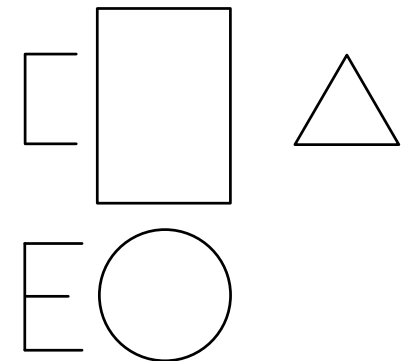

Instructions:

Draw, to scale 1:1, the following:

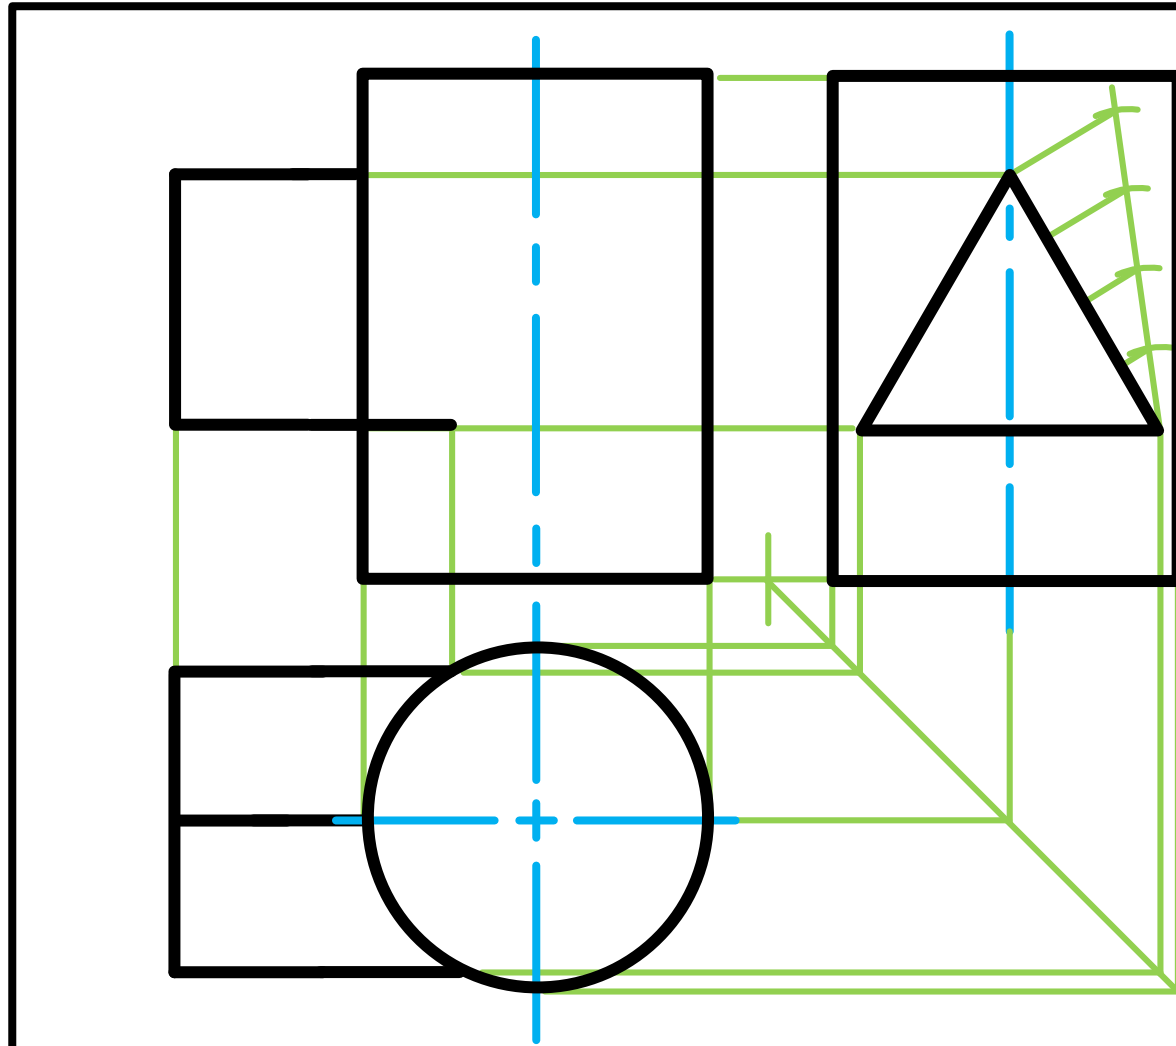

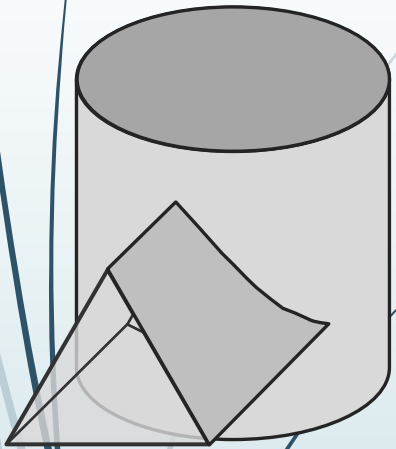

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

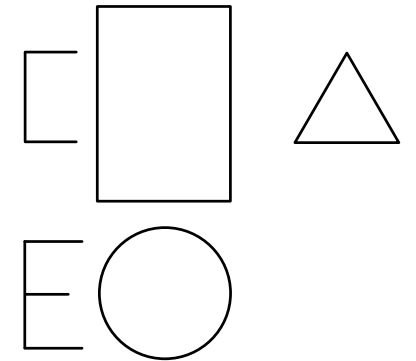

Instructions:

Draw, to scale 1:1, the following:

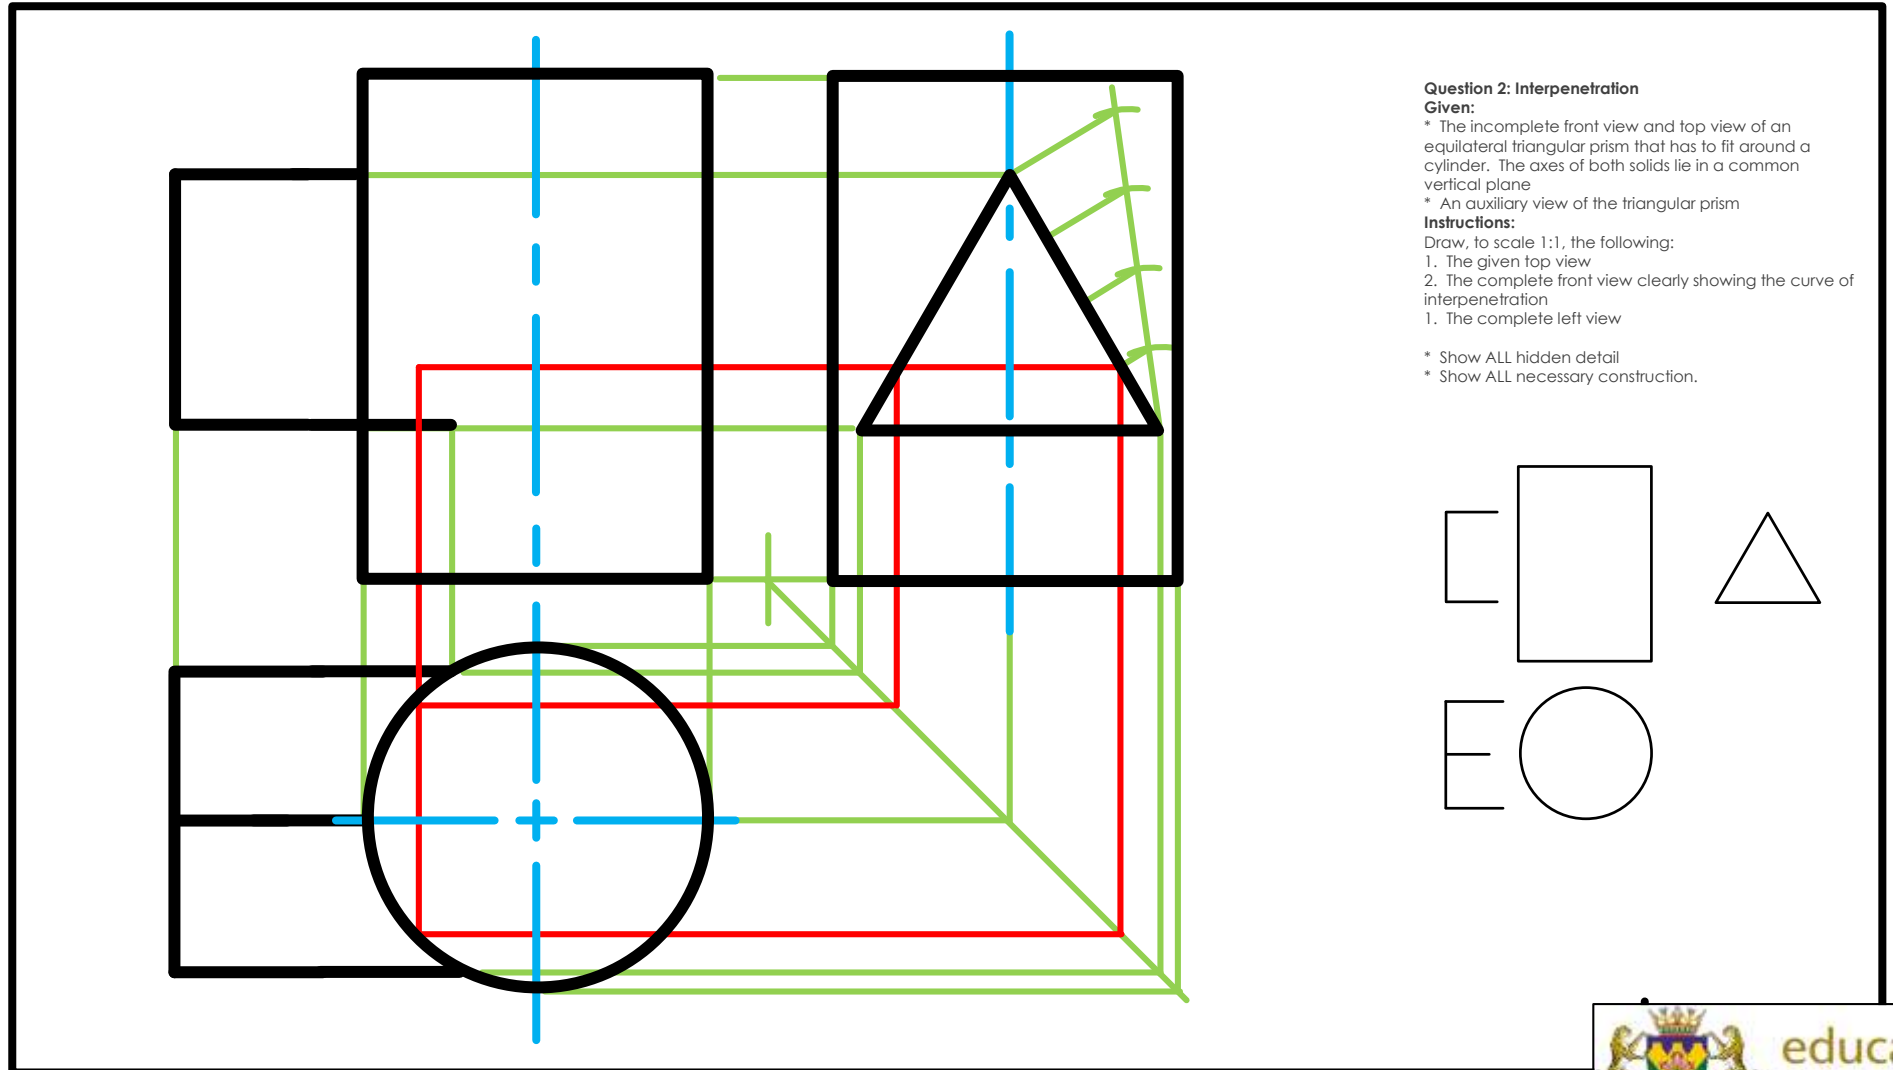

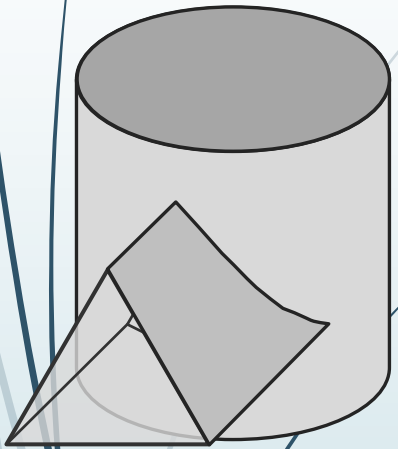

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

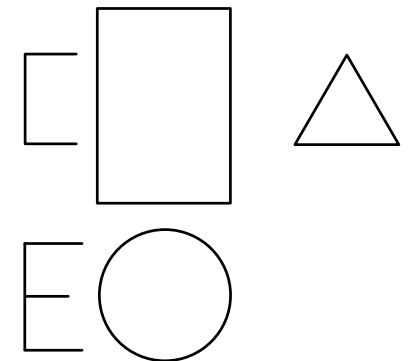

Instructions:

Draw, to scale 1:1, the following:

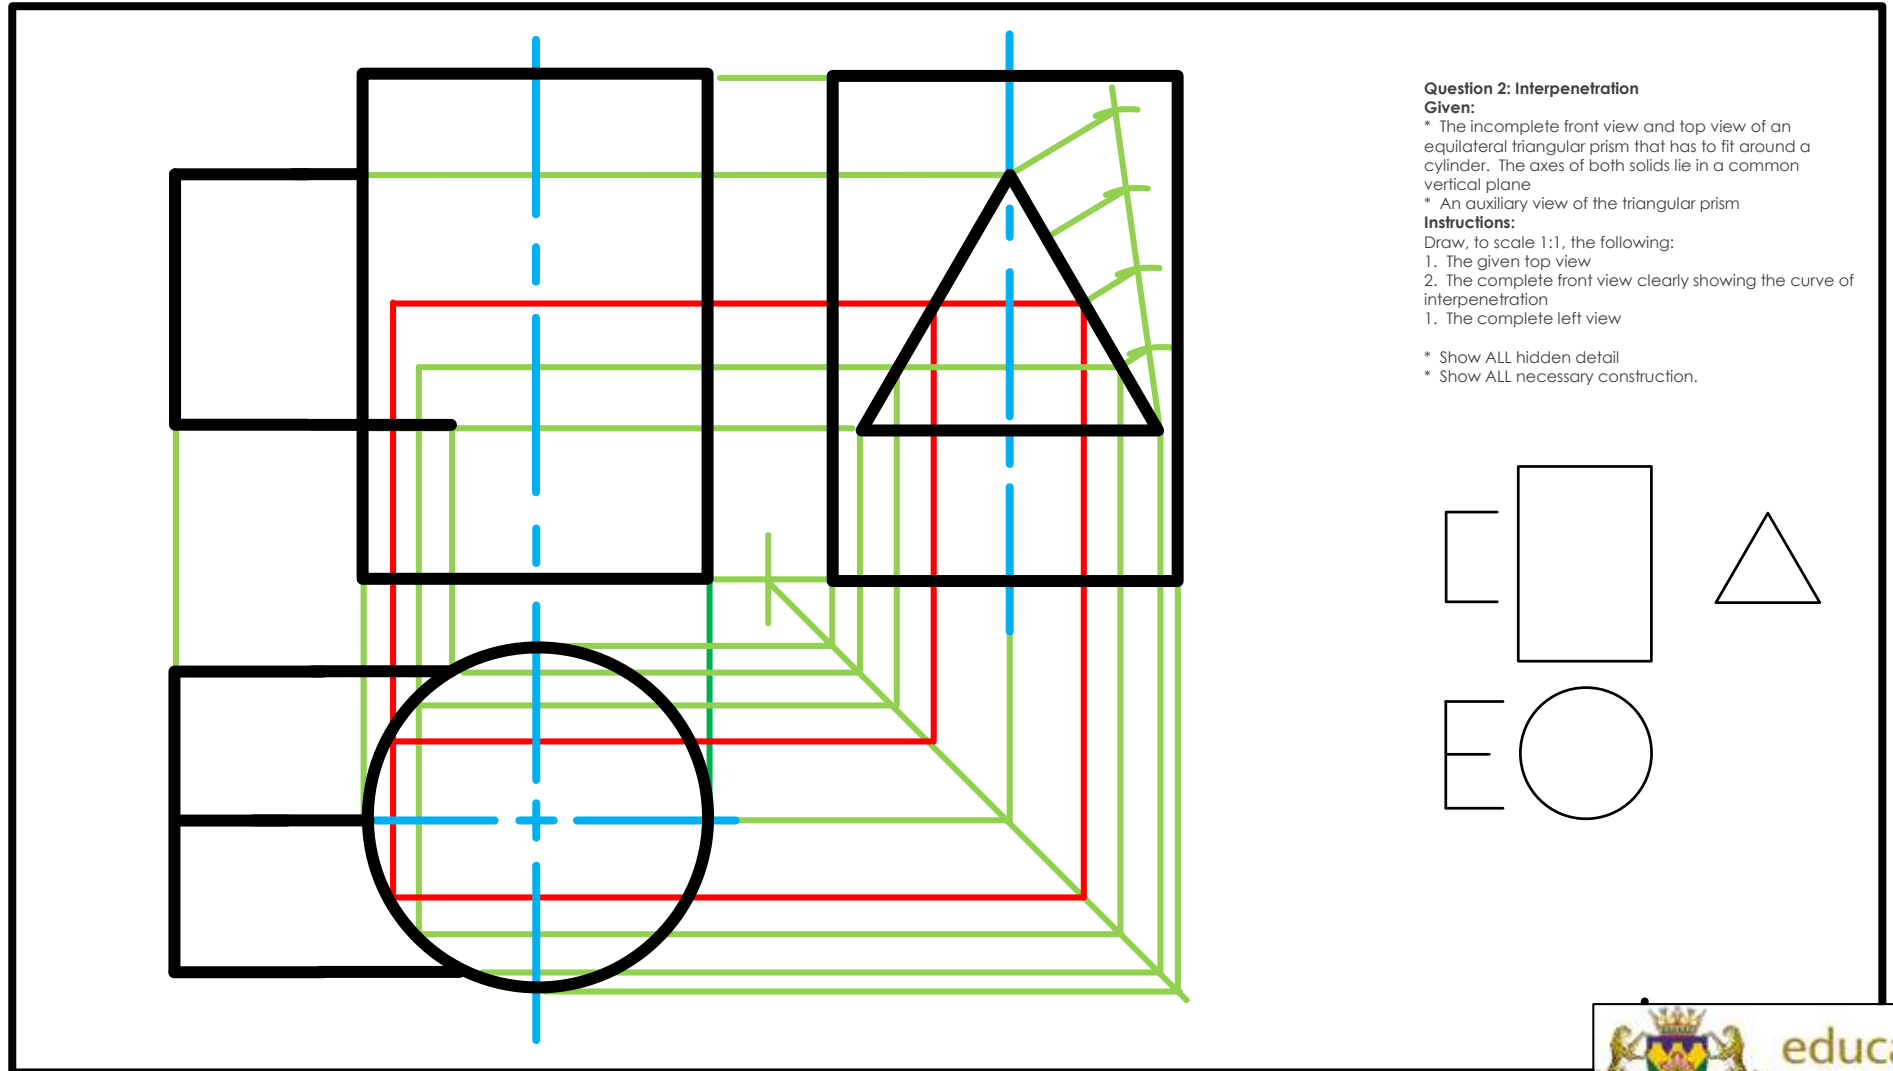

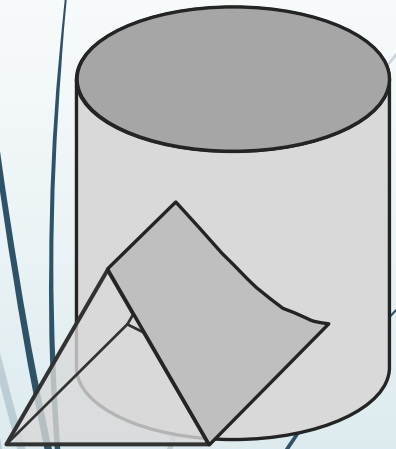

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

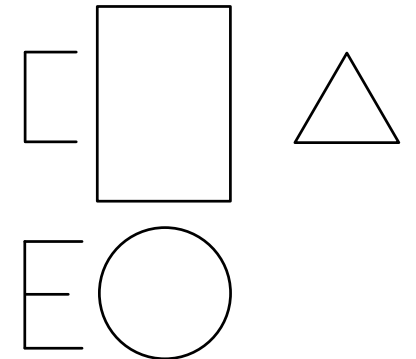

Instructions:

Draw, to scale 1:1, the following:

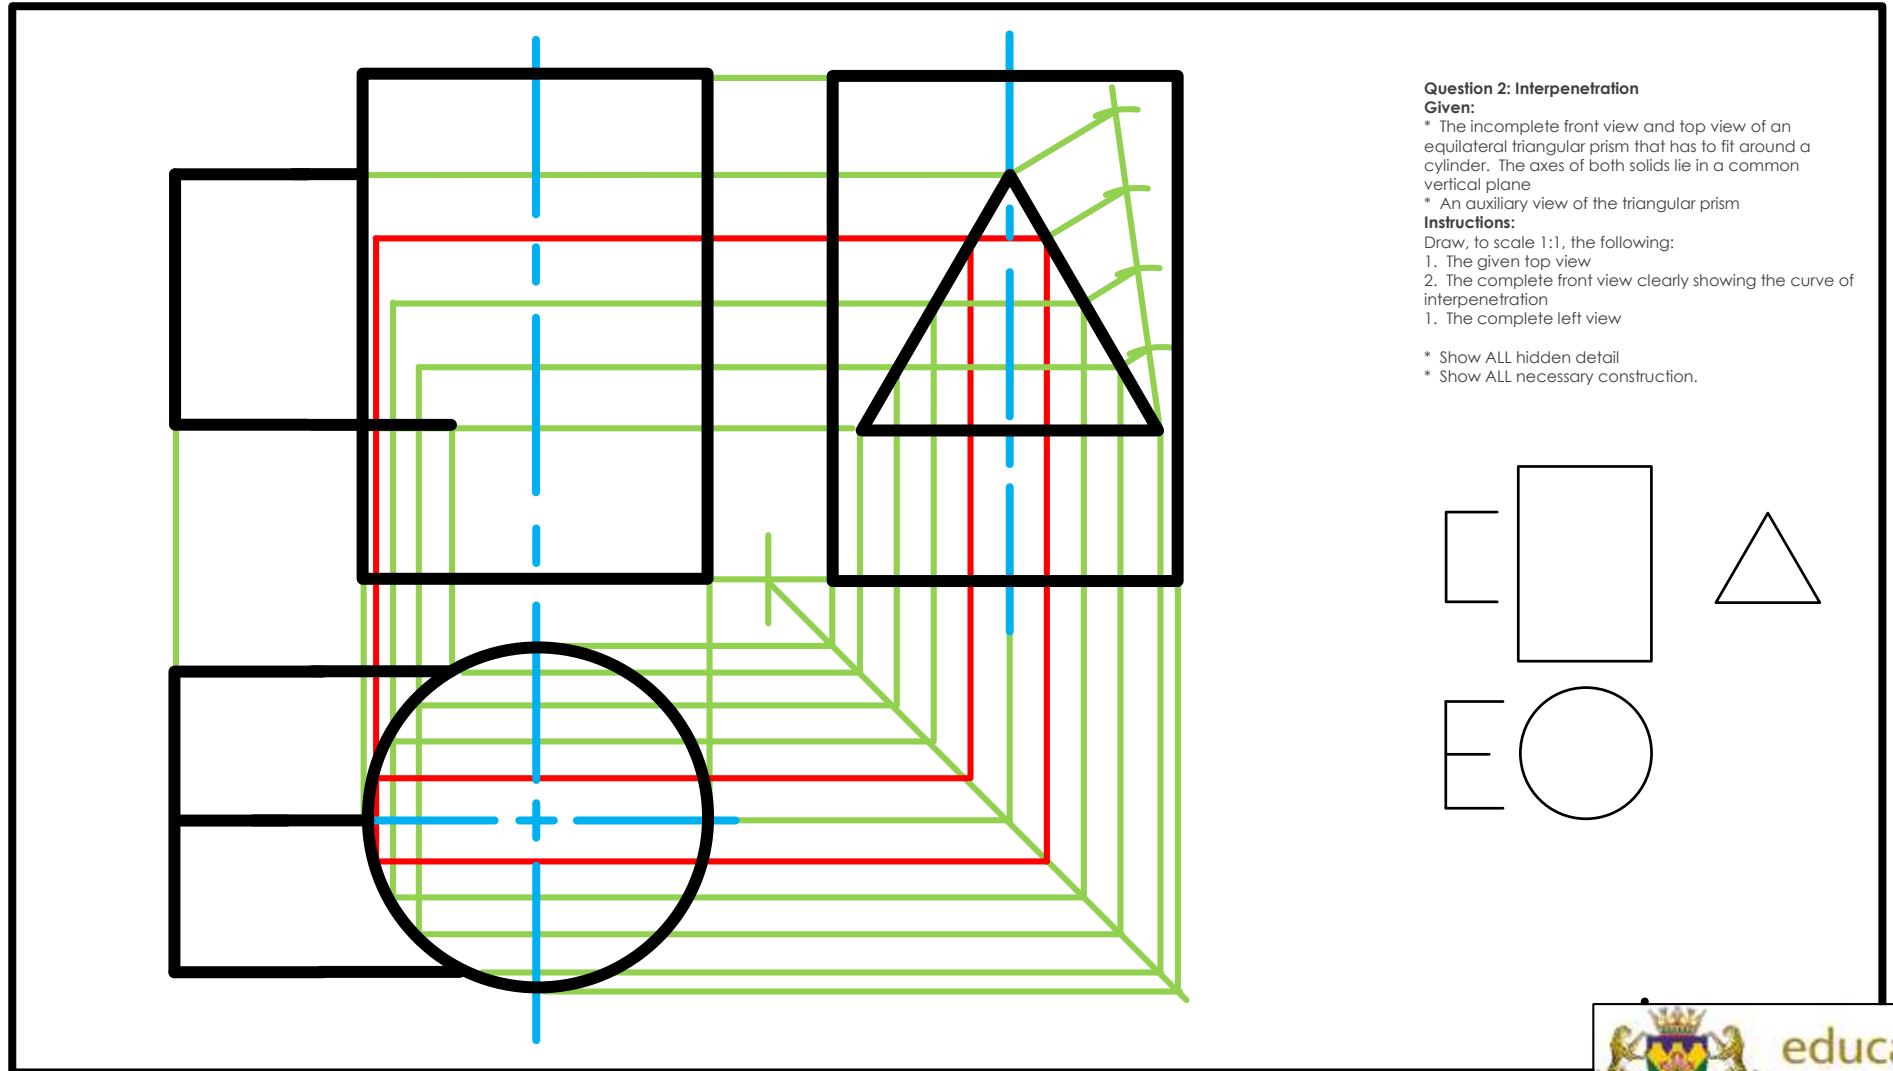

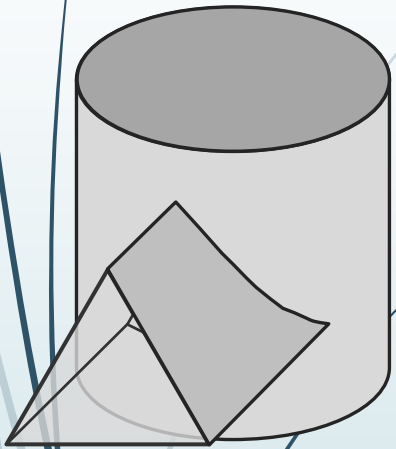

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

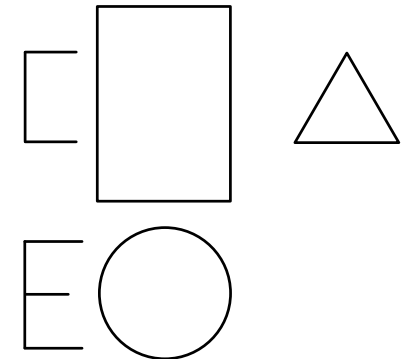

Instructions:

Draw, to scale 1:1, the following:

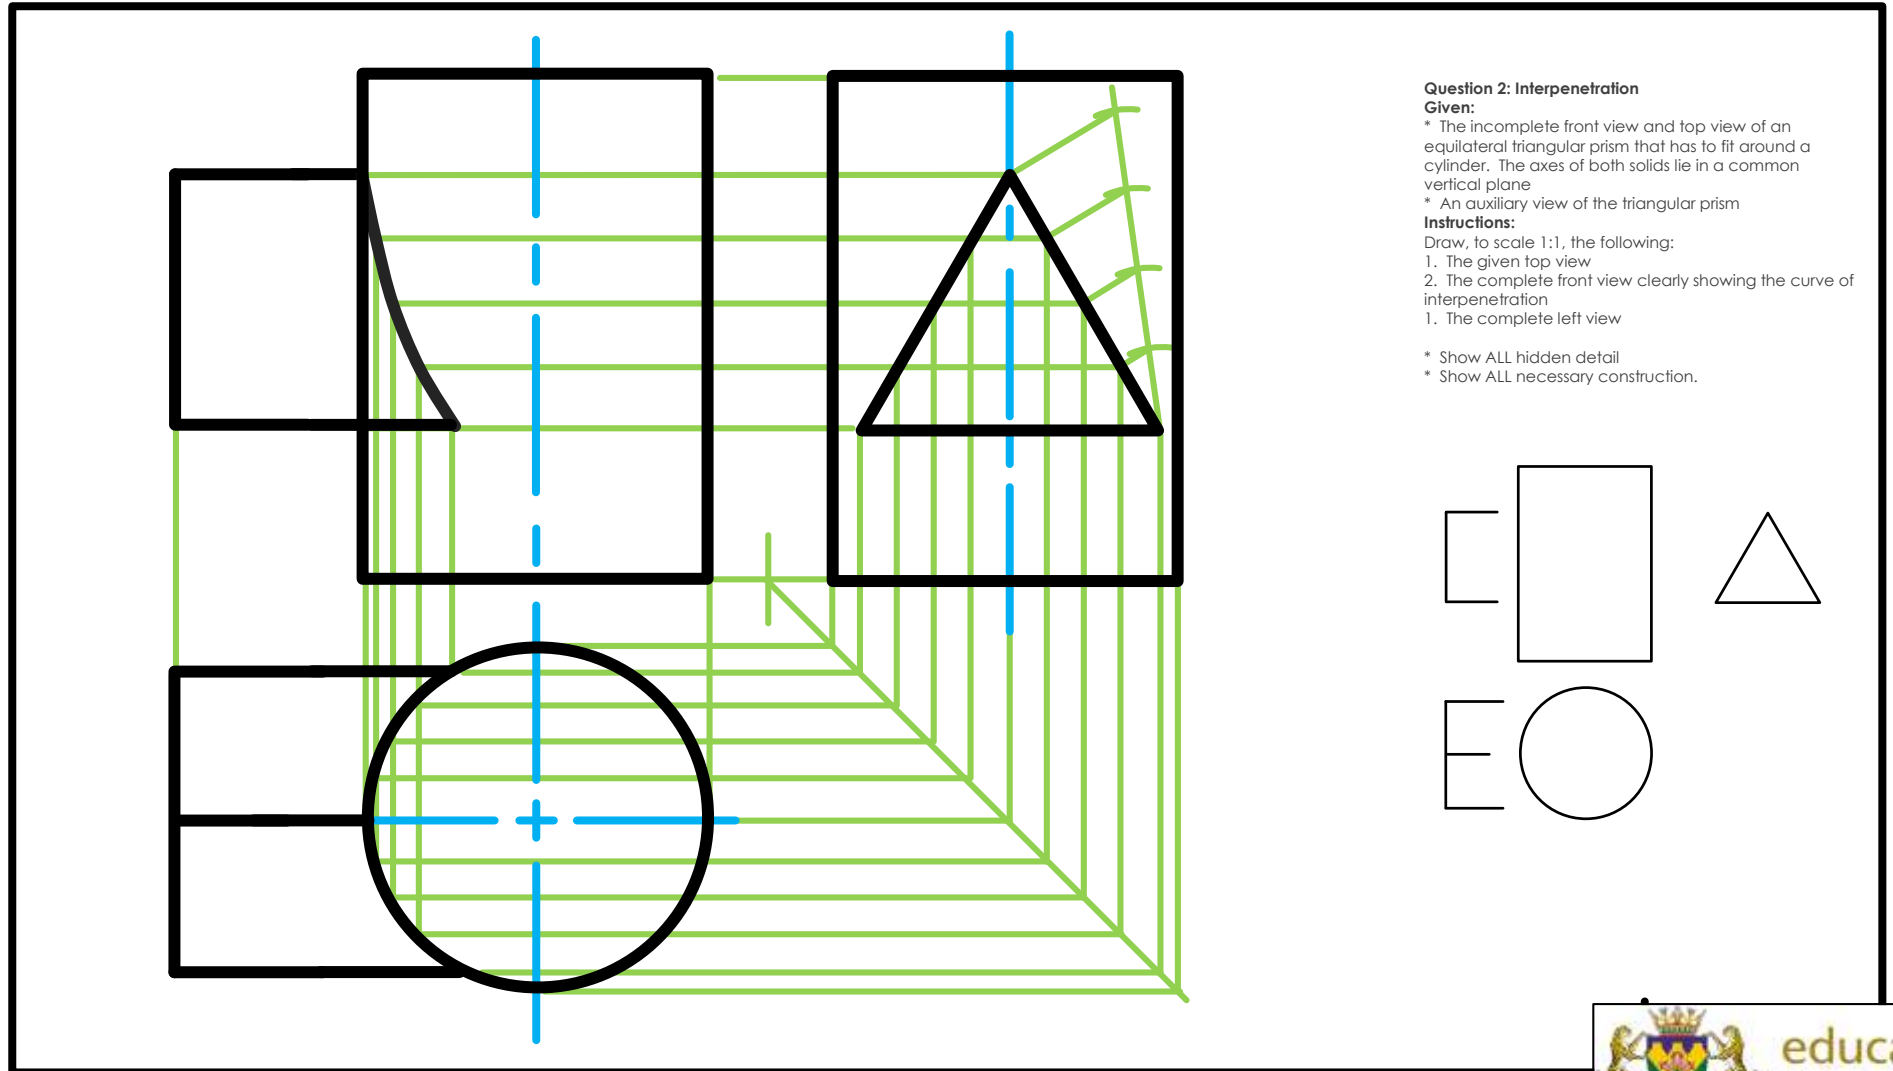

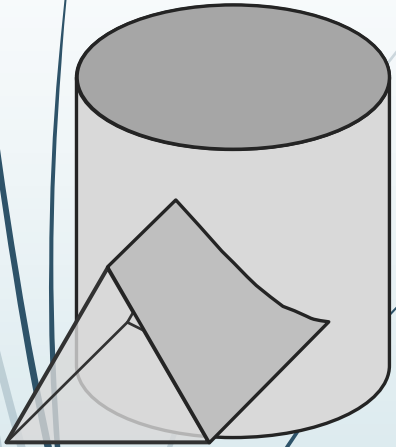

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

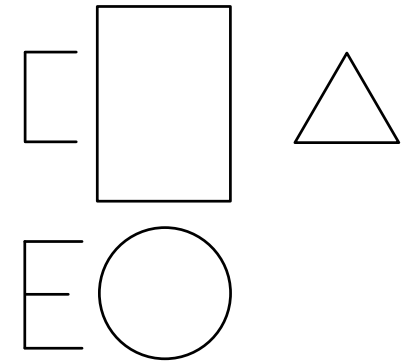

Instructions:

Draw, to scale 1:1, the following:

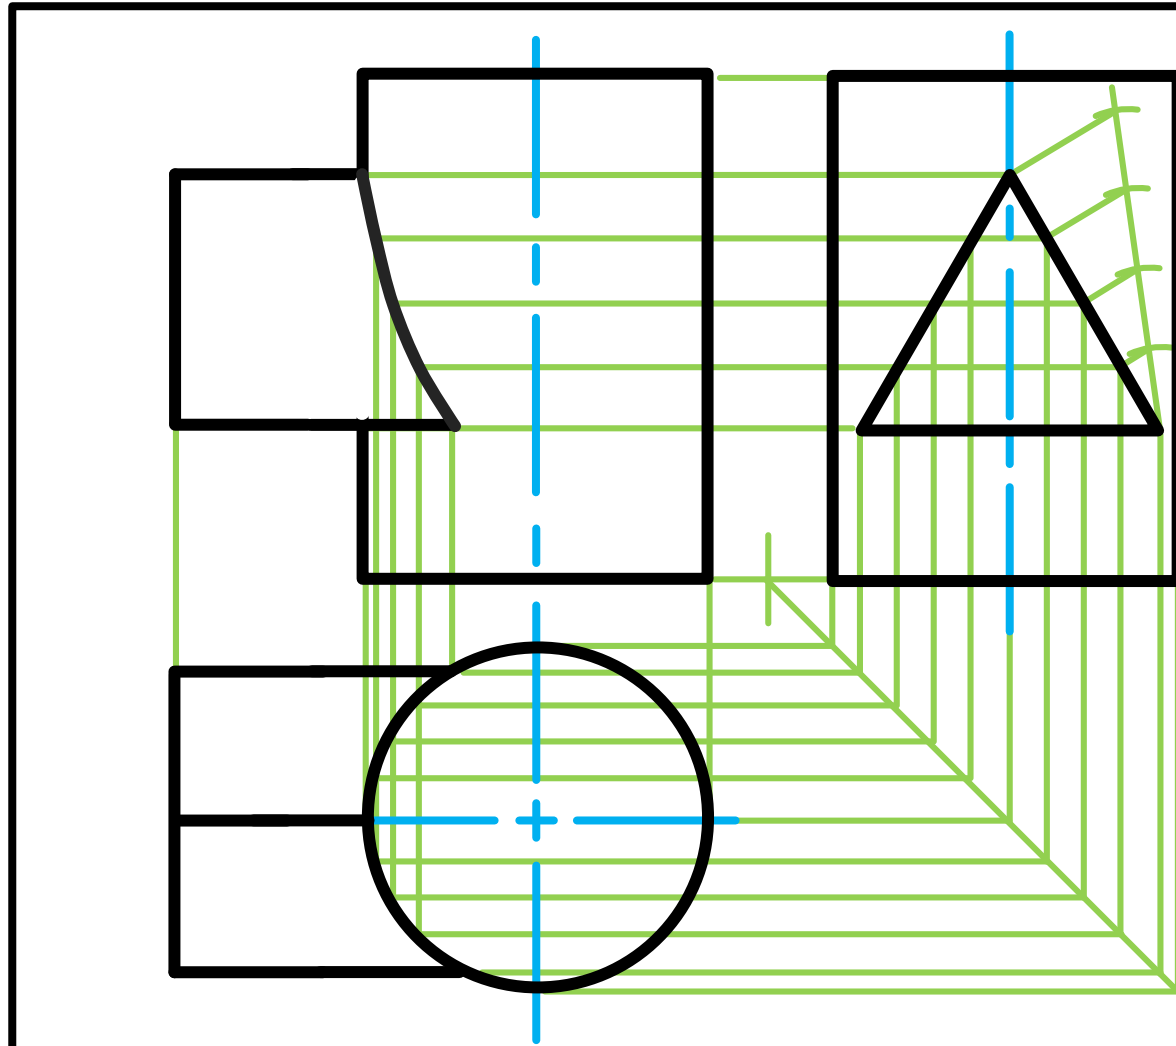

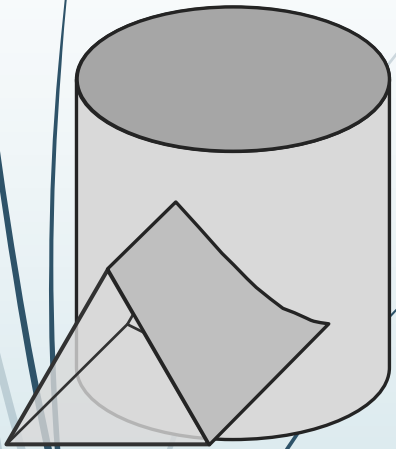

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.

Interpenetrations

Question 2: Interpenetration

Given:

* The incomplete front view and top view of an equilateral triangular prism that has to fit around a cylinder. The axes of both solids lie in a common vertical plane

* An auxiliary view of the triangular prism

Instructions:

Draw, to scale 1:1, the following:

1. The given top view
2. The complete front view clearly showing the curve of interpenetration
1. The complete left view

* Show ALL hidden detail

* Show ALL necessary construction.
